Electricity			Novi 1290 any	Working scientifically: Gathering, recording, classifying and presenting data to answer questions. E1: Identify common appliances that run on electricity. Children go on an electricity hunt/ or shown images etc. Children then must group (sorting and classifying) these appliances into changes light, changes heat, changes sound or changes movement. Working scientifically: Setting up simple practical enquiries. Record findings using labelled diagrams.		E1To be able to use recognised symbols when representing a simple circuit in a diagram. Children will have cards with symbols on the back and they have to test each other on the symbol. Then the children could have circuit diagrams and photographs of that circuit and they have to spot the mistake. On your classroom display make sure you have symbols that the children already know and symbols they are learning so differentiate between Year 4 and Year 6. Working scientifically : Identifying scientific evidence that has been used to support or refute ideas or arguments. Using test results to make predictions to set up further comparative and fair tests . Reporting and presenting findings from enquiries, including conclusions, causal relationships and explanations of and degree of trust in results, in oral and written forms such as displays and other presentations E2To be able to associate the brightness of a lamp or the volume of a human with the number and voltage of colls used in the circuit		

	Using results to draw
	conclusions and make
	predictions for new values.
	E2: Construct a simple series
	electrical circuit, identifying
	and naming its basic parts,
	including cells, wires, bulbs,
	switches and buzzers.
	Children must construct a
	simple series circuit. Children
	to draw and label the circuit in
- 1 ha	their book. Discus what
	happens when certain aspects
100	of the circuit are removed.
	Challenge pupils by - problem
1000	solving opportunities where
	they must fix circuits which
101	are not complete. What is
01	missing? Etc
2	Children could be given a
- desident	range of circuits they must
100	then predict which ones they
	think will work/ not work and
20	why.
	and the second second
- 3	
	Working scientifically:
	Setting up simple practical
	enquiries.

Reporting on findings from enquiries, including oral or

Begin by asking the children to build a simple circuit (recap from Year 4) Then ask the question "How will the number of cells affect the bulb? Then allow the children to investigate what happens and then add buzzers to see how the sound changes. Working Scientifically

Planning different types of scientific enquiries to answer questions, including recognising and controlling variables where necessary .

Taking measurements, using a range of scientific equipment, with increasing.

Reporting and presenting findings from enquiries, including conclusions, causal relationships and explanations of and degree of trust in results, in oral and written forms such as displays and other presentations

E4.To be able to compare and give reasons for variations in how

components function, including the brightness of bulbs, the

loudness of buzzers and the on/off position of switches.

Children (in small groups of 3) list the variables that they think might affect the brightness of the bulb. List the ways by which they could measure or observe the brightness of the bulb/s. The children can then choose one of the independent variables (e.g. the number of bulbs) and one of the dependent variables (e.g. brightness of bulb in lux). Placing these two variables together, the children can make their own investigation – e.g. Does the number of bulbs affect the brightness of the bulbs (in lux)?

 Straightforward scientific evidence to answer questions to support findings. E3: Identify whether or not a lamp will light in a simple series circuit, based on whether or not the lamp is part of a complete loop with a battery. E4: Recognise that a switch opens and closes a circuit and associate this with whether or not a lamp lights in a simple series circuit. E4To be able to use recognised symbols when drawing circuit diagrams and labels. E4To be able to use recognised symbols when drawing circuit diagrams throughout this topic and when linked to DT Topic. Setting up simple practical enquiries. Using results draw simple conclusions. E5: Recognise some common conductors and insulators, and associate metals with being good conductors. Children to test up investigation to test conductors and insulators to see which are the most 		written explanations. Using	Ask the children to make a prediction: possibly based on provious
